Fall 2011

Assignment I

Due Wednesday, September 21, 2011

Presenting Interesting Facts about your Element

Using today's Workshop about PowerPoint Best Practices, develop a 2-slide presentation about your element. Slide 1 is a title slide and slide 2 is the information slide.

You can include information about the discovery and characterization of the element (Is it found in nature and if so, where), any interesting history about the element, as well as past, present and future uses of the element. Feel free to include pictures. Keep track of where you find your information, but do not worry about citing any sources (yet). A good starting point may be the card you got on the first day of class.

Email the presentation to me before 9:00am on Wednesday morning (9/21) – I will download them all and we'll go through them in class on Wednesday and vote on our favorite. (There will be a 10-point bonus for the winner).
